MEDIA INFORMATION

BENTELER Maschinenbau will be showcasing more than just machines at glasstec 2026

- **BENTELER Maschinenbau will be represented at glasstec 2026 from October 20 to 23 in Hall 14, Booth A60.**
- **Live at the booth: a fully automated CNC machining line and a BENTELER washing machine.**
- **Production concepts can be experienced beyond the boundaries of the trade fair stand: virtual presentation of complete system solutions for architectural glass, automotive glass and technical glass.**

Bielefeld (Germany), October 20, 2026. At glasstec 2026, the world's leading trade fair for the glass industry in Düsseldorf (Germany), BENTELER Maschinenbau will present innovative solutions for modern glass processing on almost 400 square meters. In addition to the exhibition of a fully automated CNC processing line and a BENTELER washing machine, visitors will also have virtual access to comprehensive plant concepts and production solutions for architectural glass, automotive glass and technical glass.

Under the motto "More than Machines", BENTELER will show how complete manufacturing concepts can be experienced regardless of the physical boundaries of a trade fair stand. Visitors can use augmented reality to immerse themselves in complete production lines and get a comprehensive picture of the possibilities of modern glass processing.

Complete solutions instead of individual considerations

The presentation at glasstec 2026 will enable visitors to discover solutions that cannot be presented on a booth in their actual size and complexity.

"Today, our customers are not just looking for individual machines, but integrated solutions for their entire production," says Olaf Patsch-Berkemann, Head of Sales Architectural Glass Processing Equipment at BENTELER Maschinenbau. "At glasstec 2026, we will therefore not only be showing our technologies in live operation, but at the same time providing a comprehensive insight into complete system concepts for a wide range of requirements in the glass industry."

At the same time, visitors to the booth will experience the performance of BENTELER Maschinenbau's technologies in practice. The fully automated CNC machining line and the exhibited washing machine demonstrate the high precision, reliability and efficiency for which BENTELER Maschinenbau is known worldwide.

Experience along the entire value chain

BENTELER Maschinenbau has been developing and implementing machines and complete processing lines for the glass industry in Bielefeld for more than 75 years. The company has extensive expertise in the fields of architectural glass, automotive glass and technical glass.

Through the combination of innovative mechanical engineering technology, intelligent automation solutions and digitally networked production concepts, BENTELER Maschinenbau supports its international customers in sustainably increasing productivity, quality and flexibility. Interested visitors can see this for themselves on site: The fully automatic Automotive Glass Processing Line combines excellent quality, flexible solutions and maximum efficiency in glass processing. From loading to cutting and grinding, it enables continuous processing without manual adjustments. This system is fully automatic from a quantity of 1 to any selected batch size and is uniformly highly precise. Thanks to an automatic tool changer, tool-free changeovers and fully automated settings, the system processes glass formats from 250 x 400 mm to 1,500 x 2,500 mm. The multifunctional machining centre for external and internal grinding as well as milling can be expanded to include waterjet cutting for inner contours if required. Integrated production data acquisition also ensures maximum process control and transparency.

Visit BENTELER Maschinenbau at glasstec 2026

BENTELER Maschinenbau invites all interested parties to experience the future of glass processing live and virtually. From October 20 to 23, visitors to glasstec 2026 in Düsseldorf will discover innovative machines, comprehensive system solutions and digital production concepts first-hand.

About BENTELER

BENTELER is a globally active group of companies for customers in the automotive, energy and mechanical engineering sectors. As a metal process specialist, we develop, produce and distribute safety-relevant products, systems and services worldwide.

We are guided by our values of courage, ambition and respect.

In the 2025 financial year, our sales amounted to around 8.0 billion euros.

The BENTELER Group is managed by BENTELER International Austria GmbH, headquartered in Salzburg, Austria. Our more than 20,000 employees at around 90 locations worldwide offer first-class manufacturing and sales expertise – passionately and close to the customer.

About BENTELER Maschinenbau

BENTELER Maschinenbau is a leading international supplier of flat glass processing systems and supporting worldwide service. The company develops, designs and manufactures glass processing machines through to complex systems for further processing and finishing flat glass. Locations are in Germany, the Czech Republic, the USA, India and China. With more than 4,600 successfully completed projects in around 60 countries, BENTELER Maschinenbau supports its customers with innovative solutions and convinces as a partner on an equal footing.

Experience along the entire value chain – since 1951

BENTELER Maschinenbau has been developing and implementing machines and complete processing lines for the glass industry in Bielefeld for more than 75 years. The company has extensive expertise in the fields of architectural glass, automotive glass and technical glass.

What began in 1951 with the takeover of the Erich Kiefer company has developed into a success story over the past 75 years that has had a lasting impact on the glass industry – and continues to do so today. With a pioneering spirit, the first glass-plate washing machines, foil washing machines and pre-laminated ovens were created. These innovations enabled fast, safe and automated cleaning and drying of glass for the first time and set new standards in an industry that had previously been predominantly dependent on manual work.

For 75 years, BENTELER Maschinenbau stands for innovation, quality and tailor-made solutions in glass processing. Individual machines are being used to create intelligent line concepts that customers worldwide rely on. In 2001, a second production site was opened in Liberec, Czech Republic – the beginning of a 25-year success story! There, the focus is on the development and production of flat glass washing machines from BENTELER Maschinenbau.
